Welcome to **RED** Arena!

EMPOWERMENT THROUGH HORSES!

OUR MISSION TO EMPOWER INDIVIDUALS WITH DISABILITIES THROUGH HORSES.

We appreciate your commitment to RED Arena and sharing your time to support this mission. Through the years we have found the importance of family and community involvement to create more inclusive opportunities for every ability level. We have expanded to serve more of the community through our sibling support, job training, mental health and reading programs. Our employees and volunteers make it possible for these programs to operate and expand to service those in need. Without this dedication, our participants can't ride or receive the desired services.

OUR VALUE STATEMENT IS TO PROVIDE THE HIGHEST QUALITY FOR SAFE, COMPASSIONATE PROGRAMS WHERE PARTICIPANTS, FAMILIES, EMPLOYEES, VOLUNTEERS AND HORSES CAN THRIVE.

Our Core Values for Safety, Quality and Compassion also incorporate the talents and abilities of our employees and volunteers. We seek to foster an open, cooperative, and dynamic environment in which employees, volunteers, clients, and horses can thrive.

This Volunteer and Employee Training Manual establishes policies, procedures and conduct that will be followed by all Employees and Volunteers at RED Arena. We will make every effort to notify Employees and Volunteers when an official change in policy or procedure has been made but Employees and Volunteers are responsible for their own up-to-date knowledge about our policies, procedures, and code of conduct.

Please review the policies, procedures, and expected conduct described in this Training Manual. You will be asked to affirm that you have read, understand, agree to abide by, and acknowledge your receipt of this Training Manual. All volunteers will complete the Statement of Confidentiality, Authorization for Emergency Medical Treatment and Waiver of Liability, Agreement and provide current certifications, as appropriate, for your position.

Again, welcome to our team! We look forward to building on these valuable programs with you and our amazing community.

Best Regards,

Jennifer Young, PT, MS

Physical Therapist, PATH Registered Therapist, AHA Level 2 Therapist
Founder and CEO of RED Arena

Facilities Overview

RED Arena has grown to empower over 200 participants per week, ages 2 to 76+ years old with diagnoses including but not limited to Angelman Syndrome, Anxiety, Autism, Cerebral Palsy, Depression, Developmental Delay, Down Syndrome, Learning Disabilities, Muscular Dystrophy, Pervasive Developmental Disorder, Post Traumatic Stress Disorder, Prader-Willi Syndrome, Sensory Integration Disorder, Stroke, and Traumatic Brain Injury.

Our mailing address is: 1601 Bell Springs Rd. Dripping Springs TX 78620

Main office phone is: 512-221-5036

Main email is: info@REDarena.org

We have two service locations:

Dripping Springs

2435 W. Fitzhugh Rd
Dripping Springs, TX 78620

San Marcos

1708 Centerpoint Rd
San Marcos, TX 78666

Office Phone: 512.221.5036

Barn Phone for Volunteers to text: 512.618.5154

Email: info@REDarena.org

Programs

RED Arena offers Equine Assisted Physical Therapy (aka Hippotherapy), Therapeutic Riding Lessons, Educational and Reading Program, Job Skills Training and Vocational Programs as well as family support services, sibling riding programs. Our inclusive community events include the RED Arena Round Up Horse Show, Fall and Spring Markets and inclusive summer camps for riders of all ability levels.

Organizational Overview

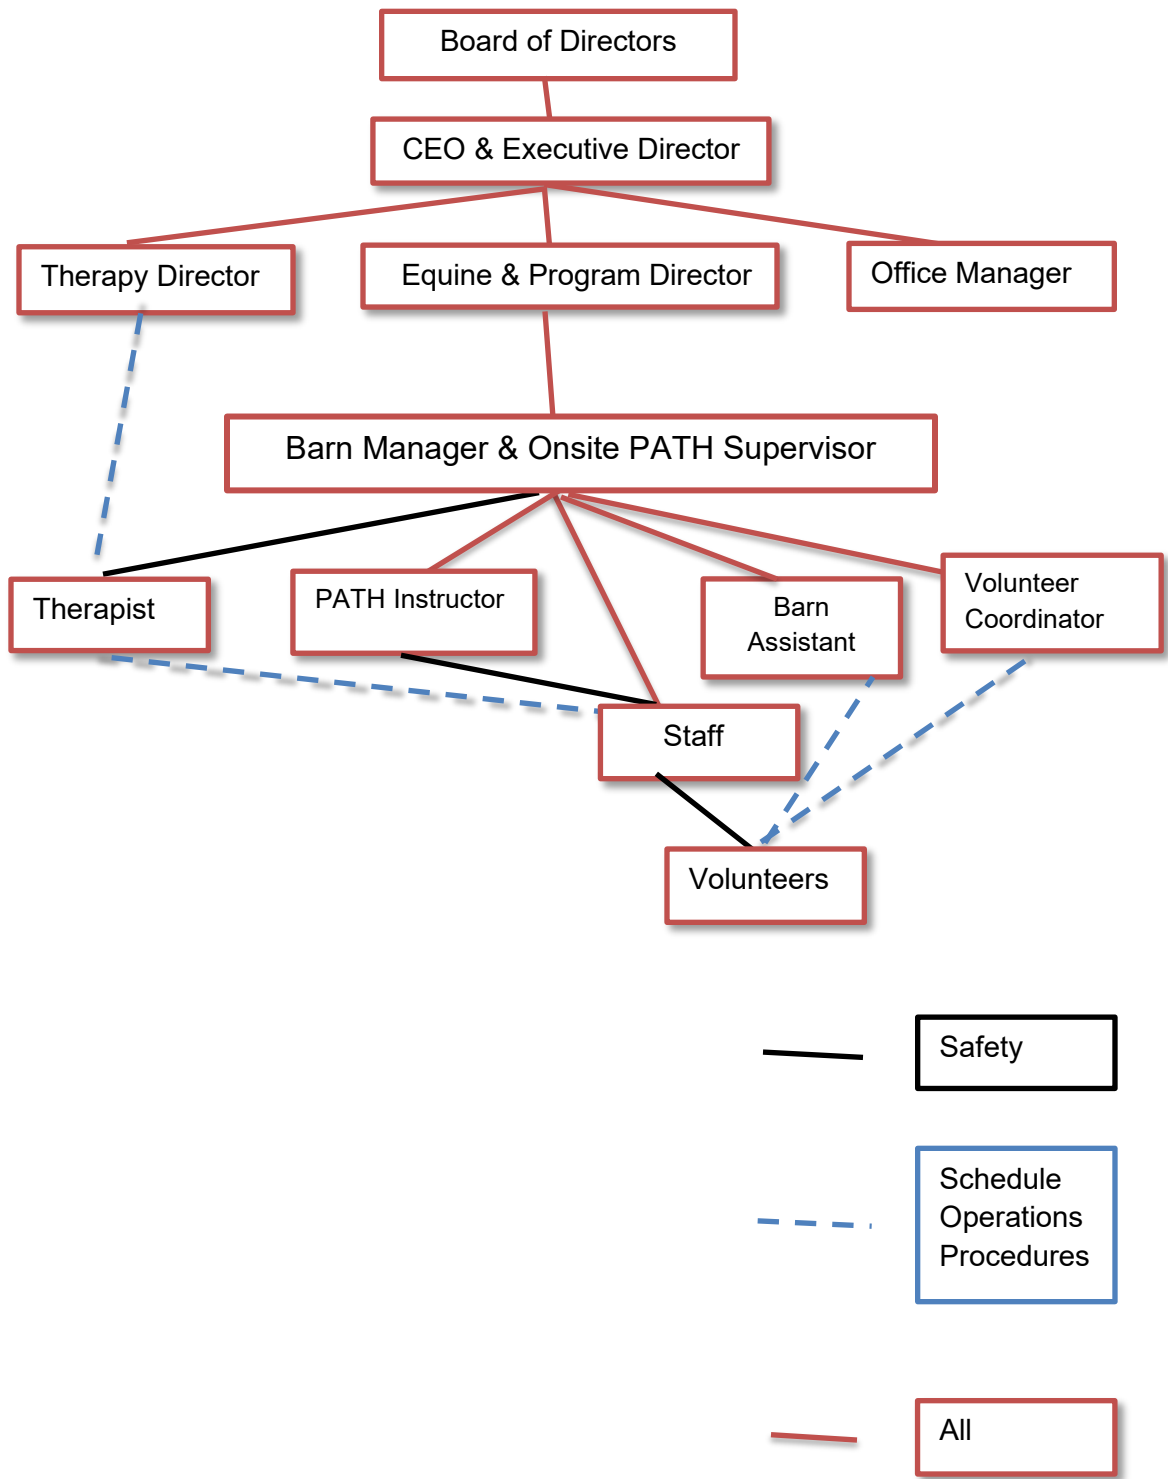

The Board of Directors can be found at: <http://www.redarena.org/about.html>

RED Arena staff includes:

- 1 CEO, Executive and Therapy Director
- 1 Equine and Program Director
- 1 Facilities Manager
- 1 Barn Manager
- 3 Licensed Therapists
- 5 PATH (Professional Association of Therapeutic Horsemanship) Certified Instructors
- 14 part time staff including Horse Handlers, Barn Staff and Office Administrators

We have over 25 Horses, 4 Miniature Horses and more than 300 volunteers annually.

Organizational Structure

Training Manual Introduction for Volunteers and Employees

This Volunteer and Employee Training Manual establishes policies, procedures, and the Code of Conduct that will be followed by all Volunteers and Employees as a condition of their employment at RED Arena. The Code of Conduct describes the expected actions and behaviors while conducting Company business.

In addition to reading and acknowledging this Training Manual, all Volunteers must sign and complete the required release of liability waiver, confidentiality form, and medical treatment form found online on the [“programs” page of REDarena.org](#)

Employees must additionally read and acknowledge the Employee Handbook.

The Volunteer and Employee Training Manual is not a contract of employment, nor is it intended to create contractual obligations of any kind. The policies and procedures outlined in this handbook will be applied at the discretion of RED Arena. RED Arena reserves the right to withdraw or change the policies, procedures, and code of conduct described in this handbook. RED Arena will make every effort to notify Employees and Volunteers when an official change has been made but employees are responsible for their own up-to-date knowledge about Company policies, procedures, conduct and working conditions.

RED Arena strives to provide an employee-friendly environment in which goal-oriented individuals thrive as they achieve ever more demanding challenges. Employees are encouraged to resolve a problem or situation with their direct supervisor. RED Arena is an equal opportunity employer and provides fair treatment of employees based on merit. RED Arena complies with all applicable Federal, State, and Local labor laws.

Barn Rules

1. Always drive 5 mph or less when on our driveway and yield to human crossings.
2. Employee and Volunteer parking:
 - a. DS is the far side of the parking lot facing the East, white fence line
 - i. Please park CLOSE together
 - ii. Once the white fence line is full, all staff and volunteers will park in the upper mulched lot
 - iii. Volunteer entrance is the far-left door from the parking lot.
 - b. SM is to the far left of the building near the employee entrance.
3. Keep the driveways free of vehicles and equipment.
4. Keep Cell Phones on vibrate only (no ringer) when in session.
5. No smoking or dipping anywhere on the premises.
6. No drugs or alcohol anywhere on the premises.
7. No running.
8. Use soft voices so as not to disturb other lessons/sessions.
9. Keep topics and discussions professional and appropriate for the audience.
10. Keep doors and gates closed and latched shut.
11. Do not feed horses unless instructed to by Staff. Never feed by hand.
12. Horses are to be tied to a secure item such as a metal fence pole cemented into the ground, at their eye level with lead rope no more than arm's length, with a quick release knot. Always remove reins before tying the horse off.
13. Tied horses must remain in your sight while tied.
14. Never tie a horse where they are, or could be, exposed to untied horses.
15. Do not lead more than one horse at a time.
16. Do not ride horses into or out of the barn or pens/paddocks.
17. Keep walkways clear at all times.
18. Take phone calls out front or in your car.
19. Do not use, look at your phone when in the tack up, arena or trial areas
20. Do not keep snacks (granola bars, nuts, candy) in your pockets.
21. Return all equipment (helmets, brushes, brooms, shovels, hoses, tack) to proper places.
22. Always approach horses slowly from the side, never directly in front or behind.
23. All equine-assisted mounted activities and equine assisted ground activities are conducted or directly supervised by a currently certified Professional Association of Therapeutic Horsemanship International Certified Riding Instructor

Hippotherapy Policies

1. Any health professional who provides direct treatment therapy services in a hippotherapy program is a PATH Intl. Registered Therapist or a Hippotherapy Clinical Specialist (HPCS), or any health professional not a PATH Intl. Registered Therapist, is supervised by a health professional in his/her respective field who is a PATH Intl. Registered Therapist or HPCS.
2. Any and all Registered Therapist or HPCS will receive specialized training to incorporate the use of an equine as a component of treatment in their respective area of expertise in order to participate in and provide a safe and effective hippotherapy treatment sessions.
3. Any health professional providing direct treatment therapy services in a hippotherapy program will receive training in the principles of hippotherapy, equine movement and equine behavior, if they have not completed the requirements for PATH Intl. Registered Therapist or HPCS designation.
This training can be completed by meeting the requirements to become a PATH Intl. Registered Therapist, by training provided by a Hippotherapy Clinical Specialist (HPCS) or current PATH Intl. Registered Therapist, or current PATH Intl. Certified Instructor or other equine therapy professional.

4. All PTAs and COTAs are supervised pursuant to jurisdictional requirements by a therapist who is a PATH Intl. Registered Therapist or HPCS in his/her respective field and who has evaluated and developed a treatment plan according to the laws of the respective jurisdiction.
It is the responsibility of the supervising PATH Intl. Registered Therapist or HPCS to develop the treatment plan of any participants that receive treatment by a PTA and/or COTA. It is the responsibility of the PTA and/or COTA and the supervising therapist/health professional to adhere to regulations of their jurisdiction. Requirements for documentation and frequency of supervision may vary according to the laws of their jurisdiction
5. The health professional who is providing direct service is either an appropriately PATH Intl. credentialed individual or is assisted by an appropriately PATH Intl. credentialed individual during all equine-related treatment sessions.

Rider Policies

1. Each rider's enrollment packet includes a signed medical clearance form signed by the doctor or PT. Riders may not ride until the document is signed.
2. All riders with Down Syndrome are required to have a physician signature indicating a recent x-ray precluding the possibility of AtlantoAxial Instability. If a rider has instability they may not participate in mounted equine activities.
3. Participant's are logged in google doc schedule and Netsuite software.
4. Participants accepted into program activities must have no medical contraindications that prevent them from riding. In the case that they have a diagnosis that requires a physician's release that release must be obtained before any mounted activities occur. All our riding participants have signed physician statements first. Precautions and contraindications are addressed by the Lead Therapist at the initial screening and documented for instructors/therapists.
5. In the case that a participant can no longer participate safely in the program's activities, they will be asked to leave the program. Situations in which this might occur include: Participant's health changes to the point that it prevents them from continuing. Participant's behavior is dangerous to themselves, the equines, staff, or volunteers. The participant cannot follow directions to the point that they become a danger to themselves, other participants, the equines, staff, or volunteers. Participant experiences a change in height or weight such that the program's equines can no longer accommodate them.
6. All PATH Instructors and Instructors In-Training are supervised by the lead Onsite PATH Instructor who is ultimately responsible for the selection of appropriate fitting of tack to the participant including saddle, stirrups, and helmet.
7. All individuals who participate in the activities of Therapeutic horsemanship must wear an ASTM/SEI approved riding helmet during mounted and unmounted activities. Participants who use alternative helmets (helmets not ASTM-SEI approved for equestrian activities) MUST have a written evaluation/justification by an appropriate licensed/credentialed health professional (PT, OT, SLP or MD) that specifically addresses the risk of equine activities to determine whether the use of this helmet is necessary AND to recommend which type to use. A non-ASTM-SEI approved helmet may be used ONLY when there are a leader and two sidewalkers with the participant as minimum safety requirements. The equine-assisted activities and therapies must be confined to an enclosed and safe arena. The equine-assisted activities and therapies must be directly supervised by an occupational, physical or speech-language therapist. There are no state or local laws requiring ASTM helmet use.

Horse Policies

Tack and Horse Selection

The Equine Director/PATH Credentialed Instructor is responsible for proper fitting of tack for all equines used in the program.

The Equine Director/PATH Credentialed Instructor and Executive Director will select the appropriate equine and tack for the participant at the beginning of each semester, and as participants are added to the schedule. These assignments should be based on the size of the participant, the needs of the participant, type of movement provided by the equine, size of the equine and plan for the appropriate activity or therapy.

If for any reason the instructor finds that the current selection of equine is either not an appropriate fit, or there is a schedule conflict, the instructor must get approval from the lead PATH supervisor on-site of any horse and tack modifications to the schedule.

Instructors and approved personnel should always conduct a thorough safety check that all tack is appropriately fitted to the rider before each session, including; saddle seat size, stirrup leathers, stirrups and helmet.

The Barn Manager/Lead Onsite PATH supervisor approves all staff and volunteer assignments.

All Stirrups should be either peacock stirrups or western safety stirrups. The student's individual needs should be considered when selecting the type of safety stirrup. Riders should always have closed toed shoes while riding or being around any horses. It is not necessary that riders always wear riding boots or hard-soled shoes with heels as long as they ride with no stirrups, or safety stirrups. In some instances Riders will ride without shoes such as in a therapy session when riding on a therapy pad.

Horses at RED Arena's amount they can be used is specific to each equine and determined by the Equine Director. At no time should any equines be used more than 2 one hour sessions in a row, and used more than 4 times in a day. Horse usage is monitored by the Equine Director and can be identified in the daily schedule.

Number of horses in the arena are determined by equine director.

Dripping Springs: 8 walk/trot, 6 walk/trot canter, 10 on trails walk only, 1 in round pen walk/trot
San Marcos: 5 walk/trot, 3 walk/trot canter, 6 on trails walk only, 1 in round pen walk/trot

Any concerns with horses identified to be lame, unsound or unsafe are immediately reported to the onsite PATH instructor who will determine if the horse can be safely used in mounted sessions under the direction of the Equine Director. These all horse behaviors, issues, concerns are addressed at the weekly staff meetings.

Code of Conduct

Confidentiality

All participants are receiving medical care with a physical therapist, occupational therapist or speech therapist and are covered by HIPAA (Health Insurance Portability and Accountability Act) Privacy Rule and laws for patient confidentiality. Under these laws we may NOT discuss diagnosis or medical care outside of information directly needed for sessions. You are also

bound by these laws and may not discuss or infer any information about the participants to anyone. All employees and volunteers must sign the Statement of Confidentiality. All rider files are kept in digital form, and allowed access by only appropriate personnel via a secured password. All files are to be annually checked and retained for the legal length of time under HIPPA rules.

Arrival & Attendance

Please arrive at least 15 minutes before your scheduled time. If you are late, please be sure to call/text the barn phone at: 512-618-5154 so we know you are on your way. Your prompt and consistent attendance is vital to our success. If you do not come, the participants may not ride. Please provide us at least 4 hours notice if you will not be able to attend. In the event of road closures causing cancellations, we try to provide 2 hours notice via text message. Please plan on coming unless we contact you.

All volunteers must log their hours using the iPad at the end of each shift, which includes orientations and trainings.

In the case that a volunteer or guest can no longer participate safely in the program's activities, they will be asked to leave the program. Situations in which this might occur include: Volunteers or guest health changes to the point that it prevents them from continuing. Volunteer or guests behavior is dangerous to themselves, the equines, staff, or volunteers. The volunteer or guest cannot follow directions to the point that they become a danger to themselves, other participants, the equines, staff, or volunteers. Volunteer or guest experiences a change in height or weight such that the program's equines can no longer accommodate them.

Staff or volunteers should report concerns of any individuals (be they staff, volunteers, families, guests) who become disruptive, threaten the safety of others or safety of rider sessions to the Barn Manager. Barn Manager can ask them to leave, contact Facilities Manager for assistance or contact law enforcement. Barn Manager should document occurrence and outcome via email to the ED.

ROUND-UP is our annual event held the weekend before Memorial Day weekend in May. Please reserve the entire weekend to support the ROUND-UP activities.

Internet, Email and Social Media

RED Arena's reputation should be protected by all employees and volunteers.

We strongly encourage you to limit the use of social media to work-related content and outreach during work hours. Additionally, you are prohibited from sharing any confidential or protected information that belongs to, or is about, RED Arena. You are strongly encouraged not to share disparaging information that places RED Arena or coworkers in an unfavorable light. The lives and actions of your coworkers should never be shared online. Please note the preferences of fellow employees and parents before you use the name of their children online.

Social media content that discriminates is strictly prohibited. Photos should NEVER be taken, or shared online, of our riders, clients or families without approval of RED ARENA Staff. Please respect individuals right for privacy.

Dress Code is the RED Arena Uniform

We require everyone to wear the RED Arena t-shirt, name tag and sturdy closed-toed shoes (no sandals or flips). You will be provided with a t-shirt and name tag (and hat or visor as available). You may wear comfortable jeans or shorts in good condition, not too tight or low cut, and not torn. Shorts should be fingertip length or longer. Hats are recommended, as is plenty of sun block. Wearing jewelry is not recommended. Fragrances and perfumes are NOT recommended due to chemical allergies of staff and participants.

Cell Phones & Talking

Cell phones are allowed to be worn during sessions, but the ringer should be turned off and calls cannot be made or taken during sessions, or during horse grooming. Please be aware that voices can carry all the way from the barn and arena to the participant waiting area, so limit topics to those appropriate to be heard by all ages. If you have an urgent call or expect one during a session, notify the therapist or instructor so they can plan for you to safely step away from the session. During sessions you must refrain from chatting or talking excessively, so that we can all focus on safety and current tasks.

Please follow the direction of your therapist when talking with our participants. Many of them do best when they have quiet time to warm up on their horse, many also need several minutes to process one request, so if we keep bombarding them with information, it only slows their ability to process and participate. Always look to your therapist for direction on this, and feel free to ask questions before or after sessions if you're not sure.

Food

Please be aware that many clients have food allergies or conditions that create very strong reactions to food especially nuts. Do not offer food to a client unless you have prior consent from the parent and therapist.

Please do not feed the horses food that is for humans and be aware that they can smell food on your hands or in your pockets. Please wash your hands after eating and before interacting with horses or participating in a session. Please do not carry food in your pockets. Remember to hydrate before arriving and continue to drink water while you are here!

Standards for Volunteers, Students, Support Staff

To qualify to participate in any activities at RED Arena everyone must meet the following guidelines: Volunteers under 15 years must have a parent attend the volunteer training but can be approved to volunteer without a parent. All volunteers under 18 years of age must have the volunteer forms signed by a parent prior to starting. Volunteers must be at least 14 years of age to participate directly with horses including grooming, tacking or side walking and must wear a helmet until 18 years of age unless you have a signed waiver. You must be at least 16 years of age to horse handle after passing horse handler training and completing Side Walker Safety Training each year. Please provide the signed Liability Release and Authorization for Medical Treatment forms each year that RED Arena will keep on file.

Volunteers at or under 14 years of age when accompanied by a parent may volunteer for special work projects on Fri/Sat/Sun. Currently we cannot accommodate volunteers under 14 years of age in the barn during sessions.

Personnel and volunteer guidelines include an evaluation of each side walker and horse handler's abilities to perform the task. The skills evaluated are reliability, strength, endurance, and communication skills necessary to assist participants during lesson activities and in an emergency situation. This evaluation is performed by the Barn Manager after being trained guided by a Barn chores, and Side Walker checklist. Annual retraining is required.

Universal Infection Control Procedures

The complete and most accurate list is posted at each location and will change/evolve as needed based on state, local & CDC information as it becomes available.

- Everyone (staff, participants, families, volunteers) is health screened and temperature checked upon entry
- Everyone will wash/sanitize hands upon entry and between sessions
- Riders have their own helmet and a dedicated belt that is not shared.
- Sanitation of used or exposed surfaces

Consistent attendance is vital to program success and is expected unless there is an illness, medical or unavoidable emergency.

Please provide as much notice as possible when it is necessary to cancel by texting the barn phone. Please DO NOT email cancelations as email is not always checked during the day. You should get an immediate response to your text.

Please do not come if you are sick including if you have fever, any contagious illness, rash or eye infection. Volunteers and staff must be fever free for 24 hours without medication before returning.

Safety Training

All Employees, Therapists, Volunteers, Students and Support Staff must complete the Safety Training prior to engaging in any activities. All safety training is to be re-conducted annually. Safety trainings included at RED Arena are:

- Safety near horses, the arena, and hazards
- Procedures for medical or environmental emergencies
- Demonstration of emergency dismounts
- Completion of safety training checklist
- Rehearse a mock therapy session to ensure a coordinated team approach prior to participant participation

Emergency Procedures and Occurrence Report

Dial 911 any time there's a threat to life or property. In any emergency situation, including but not limited to fire, tornado, severe weather, injury, or other medical emergency, such as seizures or falls, the following Emergency Dismount procedures will be followed:

Therapist will remove the rider from the horse and administer first aid/CPR as needed.

Horse Handler will remove the horse from the situation and call the barn manager.

Side Walker will first assist Therapist/Instructor with removing the rider from the horse and then activate 911 and retrieve first aid kit and AED from the barn. Let 911 know specifically where

you are including information on a nearby building or which pasture you are in. Stay on the line as instructed by 911 and/or help direct emergency vehicles to the location on the property.

After an Emergency Dismount

If the rider is not injured and the Horse Handler has walked the horse to be sure it is safe, the Therapist protocol is to always remount the rider to complete the session. It is very important that the horse knows their work doesn't end with an emergency dismount. If the rider is not able to re-mount, arrangements must be made for an authorized person to ride the horse before it is taken back to the barn or untacked. If the Rider cannot re-mount on this horse, then obtain another horse for the Rider to mount and complete the session. Check with Barn Manager or Lead PATH instructor. It is also very important for the Rider to regain confidence and end on a positive note as well as for the family.

Therapist or Instructor will document the event on a RED Arena Occurrence Report in ink along with Horse Handler, Side Walker and obtain signatures of any/all witnesses before leaving the premises. Occurrence reports must be filed with the Barn Manager before leaving the property if anyone is:

- injured on the property (falls, horse steps on, etc)
- if a rider falls from, or is removed from, a horse and touches the ground

Occurrence reports are provided to the Executive Director and filed in the main office.

Additionally, it is the instructor and horse handler's responsibility to read the horse's behavior and dismount if the horse is upset/spooked by gunshots, snakes or other issues.

Weather

When thunder roars, go indoors! Any thunder you hear is caused by lightning. Lightning can strike as far as 10 miles from rainfall. If you hear thunder, even a distant rumble, stop the session immediately and get to a safe place. The instructor will determine if and where the rider will dismount and where to take shelter. In the case of a tornado or hurricane warning, the tornado shelter is the interior bathrooms. Per NOAA's (National Oceanic and Atmospheric Administration) recommendations, if a building is unavailable, move to a hard-topped metal vehicle with rolled-up windows. If you are caught outside during a thunderstorm, follow these recommendations:

- Avoid tall objects, open areas, water, wiring, plumbing, fencing & metal objects
- Move to a dense area of small trees that are surrounded by taller trees
- Do not seek shelter in sheds, tents or porches

Natural Hazards

If any kind of threatening wildlife, such as a snake, a bobcat, boar is encountered while in session, assess the horses behavior. If the horse is calm, the horse handler should work with the instructor/therapist on best way to navigate away from the hazard. Once in a safe position, the barn manager should be called immediately. If the horse is not calm, an emergency dismount should be performed immediately and the barn manager should be notified. Snake, pest, and rodent prevention is handled by the facilities manager as needed.

Equipment

All farm equipment, such as trimmers, tractors, and power tools are handled by trained staff or volunteers. The maintenance manager is ultimately in charge of the handling of all specialized and what could be considered hazardous equipment.

Fire

Any and ALL fire requires a 911 call. A fire can grow and spread rapidly, so call 911 right away even if you think you can put out the flames on your own. Fire extinguishers are located in each office building and barn. Look for the sign and **know the location** of the fire extinguishers. During a fire evacuation, the participants should leave with their family. If there is time, RED Arena Staff will load horses to evacuate or if unable to evacuate, put the horses in the pasture WITHOUT halters.

Horse Safety

Blind Spots & Approaching Horses

Horses have a small blind spot directly in front of their face, and a larger blind spot behind their body. Do not approach a horse from behind or directly in front, but from the side near the shoulder. When walking behind a horse, stay well out of range of hind hooves, or very close to horse with a hand on their rump to avoid surprise and possible injury. Never enter a horse stall if you are under 16 without an adult or not fully comfortable around horses.

Horse & Human Body Language

Be conscious of what your horse is telling you with his or her body language. Be especially aware of signs of anger, confusion, fear, and aggression. Look for signs like pinned or sideways ears, flared nostrils, raised head, aggressive stomping or tail swishing, refusal to move, or the whites of their eyes being visible. At the same time, be mindful of your own body language and how the horse may interpret it. Horses feed off the energy of the handler and people around them. You influence your horse's mood and behavior with the tone, volume and speed of your voice, the speed of your movement, and the way that you are moving. Never run around horses. Speak in a calm, deliberate tone.

Feeding Horses

Never hand feed horses, always use a bucket. Never feed horses treats until their work is finished. Always check with staff before preparing and providing hay bags or feed for horses. Some horses take hay from square bale instead of round bale. Grain, minerals and supplements will be provided by STAFF only.

Catching

Be sure to close pen gates when going into get horses and be aware of spacing with other horses if there is more than one horse in the pen. Never approach a horse from behind, approach the horse from the side near the shoulder. Place lead rope around the horse's neck and put halter on using the buckle strap that goes behind the ears and over the poll. Halter should fit correctly with metal square 1-2 fingers below the bony structure of the cheek. If the halter has a cheek clip, the clip should face inward toward the cheek. Never wrap lead rope around your hand when leading, instead hold your hand around the loops.

Releasing

Be sure to close pen gates when going into get horses and be aware of spacing with other horses if there is more than one horse in the pen. Check that other pen/pasture gates are closed before releasing. Double check with the barn manager on which pen the horse should be returned to. To release the horse, place the lead rope around the neck, remove the halter and then remove the lead rope from their neck.

Leading

Lead your horse with their head at your shoulder, and 12" - 18" of slack in the lead rope. Allow enough space between your body and the horses head for them to move their head freely up, down and 45 degrees to each side. First use your voice to say "walk" then lead with your arm forward and a gentle hold on the rope while you take the first step. Not all horses step immediately, you may need to pause and gently ask again with a pull/release on the rope. You influence your horse's mood and behavior with the tone, volume and speed of your voice, the speed of your movement, and the way that you are moving. To stop your horse, first use your voice to say "whoa", slow your body and gently pull down on the lead rope. Each horse is different, some need a few steps to come to a stop and others may need more pressure. Be sure to ask the barn manager or instructor how the horse should respond if you are not sure. The Equine Director will conduct annual training to all instructors and horse handlers, and will work off the horse handlers checklist.

Safe Distances

Always leave at least two horse spaces between your horse and a horse in front of you. Leave at least one horse space between your horse and another horse, or object, next to your horse. Be respectful of horses' personal space while grooming. Do not play with their face while another person is grooming or while the horse is working.

Tying

Tie horses to secure items such as a metal fence pole cemented into the ground, at eye level with lead rope no more than arm's length, with a quick release knot or a safety strap. Please do not leave a tied horse unattended at any time. Please do not tie a horse where it is accessible to loose horses. Be aware of horse social hierarchy and leave adequate spacing between horses. Always remove reins before tying the horse off.

Grooming

When bringing the horse to the grooming and tack-up area, ensure that they are clear of obstacles. Grooming tools need to be placed in an elevated area, not on the ground around the horse. Be aware that isles, and walkways where participants and horses are present should be free of obstacles as well. If you are unsure if objects should be in the working area, ask or notify the Barn Manager.

If you have not had instruction on how to pick horses hooves from us, do not attempt. Each horse has different needs to be aware of, check with the Barn Manager before grooming a horse you are not familiar with. Do not stand at the horses head, give them space when grooming and tacking. Do not play with the horse once he is tied off and getting ready to work. After the horse has finished working for the day, you may provide hugs and pats.

Bathing/Rinsing

Do not bathe or rinse a horse unless you have been given instruction on how to do so.

Gates

Please close and latch all gates that you pass through and keep gates closed when utilizing the arena or trails.

Introduction to Population Served

The benefits of equine assisted activities can include:

- Increasing muscle tone
- Improving gross and fine motor skills
- Experiencing the three-dimensional movement of the horse which provides hip and back action that stimulates a person's natural walking gait and cannot be duplicated in a clinical setting
- Enhancing balance and posture
- Stimulating the cardiovascular system
- Increasing self-awareness and self-regulation
- Developing a meaningful and positive relationship with others and a strong bond with the horses
- Channeling aggressive behavior or hyperactive behavior into constructive activity
- Improving compliance and ability to follow directions
- Increasing memory utilization, motor planning and sequencing skills
- Building self-esteem, independence and confidence

**Each student has his or her own individualized set of goals and objectives established by the therapist. Treatment plans are executed and then evaluated after the lesson to monitor the student's progress.*

Glossary of Physical and Cognitive Disabilities

The following is a general list of physical and cognitive disabilities that one may encounter while participating with equine assisted activities. Please be aware that some of the students may have more than one disability.

1. Arthritis: Inflammatory disease of the joints.

- a. Types: Osteo, rheumatoid and juvenile rheumatoid.
 - b. Characteristics: Pain, inflammation, stiffness, joint degeneration and loss of movement.
 - c. Benefits of riding: Gentle rhythmic movement to promote joint mobility, strengthens muscles and relieves pain. Improved self-esteem and independence.

2. Attention Deficit/Hyperactivity Disorder (AD/HD): A persistent state of inattention and/or hyperactivity and impulsivity.
 - a. Characteristics: Easily distracted, lack of focus, high energy levels, easily excitable, poor self-awareness and self-regulation.
 - b. Benefits of riding: The horse is a strong motivator to stay on task and practice self control. Movement of the horse helps stimulate postural control and focus. Improved self-esteem and independence.

3. Autism Spectrum Disorders/Pervasive Developmental Disorders: Impairment of social and communicative skills, behavioral dysfunctions, inattention, hyperactivity and/or impulsivity and cognitive dysfunction. Accompanying conditions may include speech impairment, sensory integration dysfunction, learning disabilities, obsessive-compulsive disorder and seizures.
 - a. Characteristics: Poor social skills, behavioral challenges, odd patterns of behavior or speech, resistance to change/transitions, anxiety and depression. Sensory integration Dysfunction.
 - b. Benefits of riding: Relationship with horse and team builds social skills, independence and greater self-esteem. The horse is a strong motivator for behavior modification. Movement of the horse helps posture and verbal stimulation.

4. Cerebral Palsy: Brain damage occurring before, at or shortly after birth. It is a non-progressive motor disorder.
 - a. Types/Characteristics: Spastic- Hypertonicity with hyperactive stretch reflexes, muscle imbalances and imbalanced equilibrium. Increased startle reflex and other pathological reflexes. Athetoid- Extensor muscle tension, worm-like movements, abnormal posturing and slow and deliberate speech. Ataxic- Poor balance, difficulty with quick, fine movements and are often described as having a “rag doll” appearance. Common associated conditions: Cognitive dysfunction, seizures, hearing defects, visual defects, general sensory impairment, perceptual problems, communication problems, emotional disturbance, learning disabilities.
 - b. Benefits of riding: Normalization of tone. Stimulation of postural and balance mechanisms, muscle strengthening and perceptual motor coordination. Improved self-esteem and independence.

5. Cerebral Vascular Accident (CVA): Hemorrhage in the brain which causes varying degrees of functional impairment.
 - a. Characteristics: Flaccid or spastic paralysis of arm and leg on the same side of the body. May impair speech, sight, balance, coordination, and strength.
 - b. Benefits of riding: Promotes symmetry, stimulates balance, posture, motor planning, speech and socialization.

6. Cognitive Disability (aka Mental Retardation): Lack of cognitive ability to learn and/or perform at age-appropriate levels. Degree of retardation is referred to as educable, trainable, severe, or profound retardation.
 - a. Characteristics: Developmentally delayed in all areas. Short attention span, easily frustrated.
 - b. Benefits of riding: Stimulates group activity skills, coordination, balance, posture, gross and fine motor skills and eye-hand coordination. Provides a structured learning environment. Builds self-esteem, confidence and independence.

7. Down Syndrome (and other genetic disabilities): A genetic disability caused by a hereditary chromosomal abnormality or mutation.
 - a. Characteristics: Developmental or cognitive disability, speech delays, poor muscle tone, altered physical appearance, heart and other health related problems.
 - b. Benefits of riding: Stimulates group activity skills, coordination, balance, posture, gross and fine motor skills and eye-hand coordination. Provides a structured learning environment. Builds self-esteem, confidence and independence.

8. Multiple Sclerosis (MS): Progressive neurological disease with degeneration of spinal column tracts, resulting in scar formation and eventual loss of function.
 - a. Characteristics: Most commonly occurs in the 20 to 40 year old range. It is progressive with periods of exacerbation and remissions. Fatigues easily. Symptoms include weakness, visual impairment, fatigue, loss of coordination, and emotional sensitivity. Associated problems include and impaired bowel and bladder function.
 - b. Benefits of riding: Maintains and strengthens weak muscles and provides opportunities for emotional therapy.

9. Muscular Dystrophy (MD): Deficiency in muscle nutrition with degeneration of skeletal muscle. Hereditary disease that mainly affects males.
 - a. Characteristics: Progressive muscular weakness, fatigues easily, sensitive to temperature extremes. Common associated conditions: Lordosis, respiratory infection.
 - b. Benefits of riding: Provides an opportunity for group activity, may slow progressive loss of strength, stimulates postural and trunk alignment and allows movement free of assistive devices.

10. Scoliosis: Lateral curve of the spine with a "C" or "S" curve with rotary component.
 - a. Characteristics: Postural asymmetry, may wear scoliosis jacket or have had stabilization surgery.
 - b. Benefits: Stimulates postural symmetry, strengthens trunk muscles. (Note: Severe scoliosis is a contraindication for therapeutic riding.)

11. Seizure Disorders: Seizures are the result of, and the manifestation of, a disruption in

the normal electrical activity of the brain. Seizures are often not the primary diagnosis, but an additional medical problem resulting from another condition such as autism, brain injury, cerebral palsy, infection, etc.

- a. Characteristics: They may appear as a momentary loss of consciousness, convulsive body movement, and/or sensory disturbances.
- b. Benefits of riding: Offers team building and a sense of belonging. Provides the student with a feeling of empowerment and control over his/her body.

12. Sensory Integration Dysfunction: Hypersensitivity (or hyposensitivity) to one or more senses (vision, touch, smell, hearing, taste, movement and position).

- a. Characteristics: Aversion to loud sudden noises, tactilely defensive or seeks deep pressure, poor motor control, sensitivity to light, easily over-stimulated by visual or auditory stimuli, seeks oral stimulation, unable to block out "white noise," easily confused or overwhelmed, difficulty regulating behavior. See also Autism.
- b. Benefits of riding: Provides input to all the sensory systems, particularly movement and position awareness. Movement of the horse helps regulate processing of stimuli, improves focus and decreases sensitivity. Improves self-awareness, self-regulation and independence.

13. Spina Bifida: Congenital failure of vertebral arch closure with resultant damage to spinal cord.

- a. Characteristics: Varying degrees of paralysis of the lower limbs coupled with sensory loss. Common associated conditions: Infection, lordosis, scoliosis, and hip dislocations, hydrocephalus, incontinence.
- b. Benefits of riding: Stimulates posture and balance, improves muscle strength and self-image.

14. Visual/Hearing Impairments: Partial or total loss of vision or hearing.

- a. Characteristics: Vision impairment: spatial awareness, movement and postural problems, lack of independence. Hearing impairments: communication challenges, limited social opportunities.
- b. Benefits: Stimulates group activity skills, coordination, balance, posture. Improves communication skills. Provides a structured learning environment. Builds self-esteem, confidence and independence.

Sidewalker Training

The purpose and ultimate goal of the Side Walker is to assist the therapist with the exercises and games for the rider as well as provide a safe, encouraging and fun environment.

Mounting

When the therapist/instructor signals that they are ready to mount and have the rider up on the ramp, you can step up on the off-side steps of the ramp and greet the rider. The therapist will usually introduce you. The Side Walker stands on the off-side steps during mounting. The riders all have different needs when mounting their horse. This can range from very hands-on to minimal assistance. There are three types of mounts:

1. The **Croup** Mount: The rider stands on the on-side of the ramp and places his/her hands on the horse's withers while swinging their right leg over the back of the horse. Little assistance is usually needed.
2. The **Crest** Mount: The rider, with assistance, sits down in the center of the horse's back and then swings their right leg over the crest (neck) of the horse.
3. The **Manual Lift** Mount: The rider is mounted with maximum assistance. After the rider is mounted, the therapist and Side Walker will use an over-the-thigh hold as well as picking up the feet of the rider so that the rider's feet do not catch on the ramp while the horse walks out of the ramp. Once the horse and rider are clear of the ramp, the foot can be released.

Once walking in the arena for the warm-up laps, the therapist will instruct the Side Walker what type of hold is appropriate and safe for the rest of the session. Warm up may be a quiet time or a singing/talking/encouraging time depending on the rider. Check with your therapist.

Safety Holds

The Therapist or Instructor will inform you on the most appropriate for each rider.

- Over-the-thigh
- Ankle
- Gait Belt
- Hands-free

Dismounting

There are two basic dismounts:

1. The **Croup** Dismount: The rider will lean forward and swing his/her right leg over the croup (back) of the horse and dismount on the left side of the horse with the assistance of the therapist as needed.
2. The **Crest** Dismount: The Side Walker will help the rider lift their left leg up and over the crest (neck) of the horse.

Volunteer Participation in Sessions

With respect to participant privacy, medical diagnosis and treatment plans are not discussed with support staff or volunteers. In general, regardless of the diagnosis or treatment plan, the sidewalker has the same role. The therapist or instructor will communicate with you if they need more support from you. If you are ever not sure on your role, please ask.

Rider Focus

Another job of the Side Walker is to help the rider focus on the task at hand. It is very important not to distract the rider even though social interaction is a very important part of the therapy

session. Please try to avoid unnecessary talking either with the rider, therapist or other volunteers. Allow enough time for the rider to process the request of the therapist. Too much input or directions from different people can be very overwhelming and confusing to the rider especially if the rider has some perceptual or sensory disabilities.

Assist, Don't Do

The goal of each therapy session is to have the rider complete the tasks on their own. We encourage the rider to use their own muscles and abilities. Give the rider plenty of time to process the request and then execute it. If the rider does not respond in an appropriate amount of time or seems confused, the therapist/instructor will repeat the request and then may request you to assist as instructed. Long pauses are OK, resist the urge to help your rider by asking again, and let the therapist prompt them.

Saying Thank You

After the student has dismounted, the therapist will instruct the student to say "thank you" to the Side Walker, Horse Handler and the horse. This is another opportunity for proper social interaction. Please make sure to respond to the student and smile! The Side Walker will stay with the horse and the Horse Handler until the rider is safely out of the arena and returned to their parent, guardian or caregiver.

Clean up

The Side Walker is responsible for picking up all the dropped toys and returning them to their appropriate place in the arena to be ready for the next session. Toys should be wiped or rinsed after each rider. After the last session, all used toys should be cleaned and replaced. The barn and stalls should be clean. Check with horse handlers if assistance is needed to groom and put horses away.

Horse Care

We want to ensure our horses are well cared for physically and mentally. The job of a therapy horse is often not physically taxing but can be very mentally taxing. Just like with our participants, too much information or stimulation can be confusing and result in negative behaviors. Please avoid being unnecessarily in the horse's "personal space", specifically around their head when they are being groomed and tacked. To help respect the horse's "personal space" only one person should groom/tack at a time and no one should be standing at the horse's head when they are being groomed/tacked. In the ramp and in sessions only the horse handler or instructor/therapist should be touching or correcting the horse in anyway. This includes but is not limited to checking the girth, asking for a side step, blocking the rider's heel, or making the horse go.

Grooming Horses

Start by curry combing in circular motions starting at the neck and moving toward the hind quarters to bring the dirt out of the horse's coat. Next, use a body brush starting at the neck and moving toward the hind quarters using long strokes to brush away the dirt. Make sure to also gently brush the face. Brush tail starting at the bottom move up to the top.

Picking Hooves

Once you have been trained to pick hooves, use a hoof pick to get all of the dirt, rock and manure out of each hoof.

1. Stand next to the horse at his front left side with your toes pointing toward the tail. For consistency, pick hooves in this order: horse left front, horse left rear, horse right front, horse right rear.
2. Start with your hand at the horse's shoulder and run it down the back of the leg to the ankle then gently squeeze. Slowly lift horse's hooves, mindful of arthritis. Wait for hind legs to relax and lower before picking.
3. Hold the hoof up with your inside hand and pick away from your body (from the heel of the horse toward the toe). Hold your hand close to the edge of the hoof so it stays supported while you pick, but out of the pick's way.
4. ALWAYS be ready for your horse to put his/her hoof down and be sure your foot is not under your horse. Always hold hoof securely in your hand, do not hold by pastern and do not drop to the ground.
5. Check for any new injuries or swelling and report to Horse Handler or Barn Manager.
6. Consult with the Barn Manager or Equine Manager on instructions and/or supervision for bathing horses, treating wounds or sores and use of fly spray or fly masks.

Tacking Up

Check the schedule to see what tack the horse requires for this session, and check the horse tack chart to verify that you have the correct tack for that horse and rider. Ask the Barn Manager for assistance, if you are not sure. Be sure to check all tack and equipment needed to be sure that it is in good repair before use. Equipment that is not in good repair (e.g., condition of leather, stitching, fasteners and buckles) must be reported to the Barn Manager and removed from service immediately after discovery of the problem.

Therapy Pads

Place a red therapy pad on the horse's back. Make sure that it is appropriately placed with the front part over the withers. Also, make sure the zipper is in the back. Place pad no further back than the back edge at the cowlick of the horse's flanks. Place the surcingle & girth in the appropriate place behind the withers and tighten it enough to keep the pad from slipping. Always tighten girths slowly and gently and avoid over tightening.

Saddle

Place the appropriate saddle pad or blanket for the horse and saddle you are using on the horse's back. English blankets will have velcro tabs on the front of the pad. Place the saddle on the horse's back leaving the space of 2-3 fingers between the shoulder bone and the front edge of the saddle. Western saddles are tightened and secured with a "Texas T" on the cinch. English saddles have a girth attached to billets on both sides of the saddle, with the velcro loops going around the billets to prevent the blanket from slipping too far back. Always tighten girths slowly and gently and avoid over-tightening.

Additional Equipment

Check the schedule to confirm if your rider requires any additional equipment such as bitless bridle, reins (rubber or cloth), stirrups (size and leathers), or adaptive equipment. Check the stirrup chart for specific rider equipment and settings.

Horse Handler Training

Primary Tack Check

Typically you will be tacking up the horse. If you are given, or pick up your horse please confirm with the schedule that the horse is wearing the correct equipment for that session, and with the horse tack list that it is wearing the appropriate equipment (such as specific saddle and girth size, type of halter and lead) for that horse. Check that the stirrups and reins are correct for the rider, if applicable. Check that the saddle is on appropriately with the proper pads, if applicable. Girth can be loose at this time, and will be tightened after warm up and prior to mounting.

Warm Up

Different horses need different things in the time before a session starts. Use this time to get your horse “with you” or responding quickly to the softest, quietest cues you can. Utilize walking, halting, reversing, and backing depending on your horse’s needs. You can practice entering the ramp or familiarize new objects, toys or activities to your horse.

Secondary Tack Check

After your horse is warmed up, and before your rider is at the ramp, please tighten the girth of the therapy pad or saddle so that two fingers fit snugly between the girth and the horse at the bottom and center of the girth. Please make sure any additional equipment is ready for the session and the rider to mount, such as stirrups lowered, or reins attached and tied into a neat knot on the crest of the horse so they are not in the way (unless instructed otherwise by your instructor).

Mounting

When the instructor or therapist signals for the horse to enter the ramp, make sure the horse is fully prepared to enter the ramp. Walk up to the ramp and then turn around and face the horse as you walk backward through the ramp. Make sure you are very close to the on-side of the ramp so the rider can mount with ease. Stop the horse where the rider is. The horse should be standing square and completely still before the rider mounts. Wait for the rider to mount the horse and that the Instructor/Therapist and Side Walker are ready to start. When the rider gives the cue, walk the horse straight forward (still walking backwards) to the end of the ramp and then turn around and proceed to the warm up laps. Make sure that before the horse turns when exiting the ramp that your instructor or therapist have adequate space. Your instructor or therapist may ask you to enter the ramp backwards - please circle the mounting area and lead the horse into the ramp from the other side. Some riders need to mount from the right side of the horse instead of the left.

Leading the Horse

Technique

Your horse should lead with his or her head at your side. RED Arena horses are trained to lead from the right or left side. Hold the lead rope with about a foot of slack with your hand closest to the horse, with the additional lead folded neatly in half or in thirds in your other hand. Never wrap the lead rope around your hand, wrist or arm.

The horses are trained to respond to body language and vocal cues. Cue your horse a second or two before using your body to ask what you want, and only then follow up with the lead rope if necessary. Our horses have very important jobs and we try to keep them happy by giving them the opportunity to respond to the lightest pressure possible.

To halt, say 'whoa', stop walking while rolling your shoulders back and down, and then if necessary gently pull the lead. To walk, say 'walk' or 'go', raise your energy, slightly lift the lead rope and take a step. To turn, turn your upper body the direction you would like to turn, and reinforce with the lead rope only if necessary. To slow a horse down, use a vocal cue ("easy") and take longer, slower steps. Do not make sharp turns unless instructed specifically by your instructor or therapist. Relay the rider's commands to your horse.

At the halt you are allowed to face your horse to monitor his/her behaviors, body language, and assess the cause of any misbehaviors, but your attention and focus must remain ON THE HORSE at all times and not interacting with the rider or session.

Equipment

Potential equipment that may be used while leading the horses at RED Arena includes a halter and lead; a hybrid halter which utilizes a knotted noseband which works on pressure points on the horse's face, allowing for additional control with less pressure; a bitless bridle which a lead would be attached to a ring on the noseband; a halter with a chain lead; and a halter with a "team lead". Familiarize yourself with what these different pieces of equipment look like as different horses have different equipment needs.

Trail Safety

Safe Footing

Typically trails will be assessed for safety and closed with a cone prior to sessions beginning if there is significant wash out due to weather. Never go past a cone indicating a trail closure. Do not lead a horse over severely uneven footing or mud. Know the abilities of the horse you are leading, some may not be able to go up or down steep hills. As the horse handler, you have the authority to determine if a trail is not safe to use.

Safe Distance from Hazards

Maintain a safe distance from hazards at all times including the pond, holes, low hanging branches, snakes and other wildlife, fences, golf cart, well, equipment and the hay feeder.

Safe Distance from Activities

Our activities are very fun and safe distance will vary from activity to activity and horse to horse. If you are unsure of spacing, check with your therapist or instructor and do not lead a horse closer than is in your comfort zone. Ensure that at all times, there is enough space for any sidewalker or instructor to safely exit an area they are standing in should an emergency occur.

Arena Etiquette

Leave a minimum distance of 2 horse lengths between you and other horses at all times. You may pass a slower horse at a safe distance. Be courteous of others using toys and activities in the arena. If in doubt, always halt and yield to another horse such as when entering or exiting gates.

Dismounting

Dismounting procedure is much like the mounting procedure. The instructor or therapist will verbally review this procedure before entering the ramp or mounting block. Make sure your entire team is ready to enter the ramp before proceeding to do so. Keep your horse at a steady pace and do not allow them to rush into the ramp. Enter the ramp backwards and keep the horse as close to the instructor's side as you are able to simplify dismounting. Halt horse square and don't begin to dismount until all the horse's legs have stopped moving. When exiting the ramp, wait until the rider is at the gate or until instructed by the therapist or instructor. Sometimes, the therapist or instructor will ask you to walk the horse to the end of the ramp to for the rider to say goodbye; this is okay but please wait for the instructor to invite you to do so.

Participation in Sessions

While in a therapy session or riding lesson, your job is strictly to lead the horse and NOT to interact actively in the therapy session. Please remain facing forward at all times and make sure the horse is calm and focused on his/her job. You may face the horse at the halt in order to monitor and assess his body language and behaviors, but as Horse Handler you are responsible for the horse and it is imperative that that is where your concentration is at all times during the session, to maintain safety. We know that our riders are delightful and their sessions are fun and it is very tempting to be involved, but please keep your focus on your horse during your session hours.

Horse Behavior Management

Problem Behaviors

Potential problem behaviors include walking too fast, turning a direction you do not want your horse to go, ignoring your cues, pinning ears, stomping, swishing its tail, spooking, startling, and biting.

Identifying Causes

If your horse is demonstrating one of these behaviors, the first thing you want to do is try to identify the cause (if it is safe to do so). If your horse is pinning its ears, swishing its tail or stomping, there may be a biting fly or wasp, there may be a problem with tack fit, or the rider may be applying pressure with leg or seat causing the horse irritation. If the horse is walking too fast, check that the rider is not applying leg, seat, or heel pressure. If the horse is turning somewhere you are not asking it to go, check that the rider is not unintentionally giving it a cue. If none of these are the cause, you may correct the behavior. Always let the barn manager know immediately after the session if there has been any issues with the horse so she can address it immediately.

Correcting Behaviors

We try to use the least pressure possible and appropriate to the behavior being displayed when correcting our horses. Communicate calmly to your team what you plan to do. If your horse is walking too fast, initially you may use a vocal cue like "easy" and slow your body language, lower your energy, and take slower, longer steps. If your horse does not respond to this, halt the horse, and add halts as frequently as you need to until you are able to manage the behavior. You may also back your horse up to get its mind focused on the task at hand. If your horse is acting startled such as refusing to walk forward, head raised, nostrils flared, talk to the horse in a soothing tone, pat the horse, and try to get the horse moving again. Be prepared and have an

appropriate grip on the lead rope. If you see something that will likely startle the horse on the trail, such as deer laying in the bushes ahead, you may halt your horse a safe distance away and ask your sidewalker to walk ahead so the deer will stand and your horse will identify them before being close enough to be startled. To manage biting behaviors in the ramp, you may hold the lead rope over the horse's nose to prevent it from being able to put its head somewhere where it can bite you (our horses rarely exhibit this behavior). If a horse is nipping while you are leading it, make sure to maintain appropriate personal space so that he or she is not able to do so. Always let the barn manager know immediately after the session if there has been any issues with the horse so she can address it immediately.

When to Call a Session or Emergency Dismount

The Horse Handler and/or Instructor have the authority to call an emergency dismount if they feel it's necessary. If your horse is uncontrollable or you feel it is not safe to continue the session, say "OFF OFF OFF" and your instructor will dismount the rider. If your horse is visibly lame, end the session as soon as possible. Never mount a rider on a horse that is already visibly upset or spooking in the mounting ramp or block. Always let the barn manager know immediately after the session if there has been any issues with the horse so she can address it immediately.

Complete the Volunteer Forms

Please complete the following forms online if you have not done so already. These forms will need to be completed annually.

Forms can be found at: [Programs page of RED Arena](#)

1. Volunteer Contact and Medical Information
2. Statement of Confidentiality
3. Photo Release
4. Authorization for Emergency Medical Treatment
5. Waiver of Liability
